

Custom design to suit you

OCC MarketPlace is supplied with a 'vanilla' user interface that can be customised to meet specific Local Authority / Regional standards. The resource directory can be published on an LA web site as a full replacement or enhancement of existing functionality.

For LAs that do not have the technical capability we offer a design service to customise the look and feel of the User Interface as required and, as with all our products, **OCC MarketPlace** is backed by first class service and support.

Management interface of **OCC MarketPlace**

The extensive management interface for Local Authority and Third Party users includes the following features:

- Full control over the Organisations and Services; their details and their categorisation
- Vacancies listings where service providers can advertise places for their services to the LA
- Document repository for sharing files between specific, or groups of, users
- Events, for users to keep track of meetings, tenders, etc.
- Reporting based on Microsoft SQL Server Reporting Services
- Management of user accounts, dictionaries and system settings, allowing the LA to self-manage the system

OCC MarketPlace

Over 40 LAs have been using the OCC market portal (SPOCC.net) for several years. To support Personalisation, we have overhauled and extended the portal to become **OCC MarketPlace**, a comprehensive services directory for personalisation with information about trusted and safe services.

Benefits of **OCC MarketPlace** include:

- Comprehensive and extensible resource directory
- Shopping basket and vacancies management
- Search by keyword, service type and locality
- Open standards to link to multiple data sources
- Gives people access to trusted service information
- Providers can update their service information
- Service directory is automatically updated when LAs approve services
- Local Authorities and regions can combine directories
- Quality ratings increase people's safety and confidence
- Forums and feedback from other users tells it "as it is"

Powerful engine for searching

At the heart of **OCC MarketPlace** is a powerful search engine that finds the appropriate services for a citizen in the fewest number of clicks. Users are able to view search results by region and / or postcode with active links to Google Maps. Similar to websites for finding hotels, the directory contains comprehensive and comparative service information. Results can include user feedback, cost, quality, Local Authority ratings and outcomes information where this is known. There are links to popular social networking sites where prospective users can share their experiences.

Quality information

To help people choose safe and quality services, the resource directory can display feedback from service users on service quality and value for money as well as Performance Indicator, Outcomes, CQC ratings and Accreditation data. The **OCC MarketPlace** forum provides a space for users to share their experience of the service.

Address information includes automated links to Google Maps.

Direct communication to service providers

Each visitor may create their own shopping basket of services and, through the portal, make further enquires directly to the service providers. Providers wishing to list their services on the **OCC MarketPlace** can apply to the LA for an account. Once registered, providers can maintain their own data by submitting changes and additions to the LA for approval.

Up-to-the-minute information

To be reliable, a directory must contain up-to-date information. **OCC MarketPlace** comes with live integration with existing OCC databases, with the ability to include up-to-date costs, availability, quality and outcomes information. We provide an open standard Web Service API to allow interfacing with other data sources, such as existing resource directories. Using our open standard, data from individual Local Authorities can be aggregated to create regional and national directories.
